

GREEN RESIDENTS

ADVISORY OF FRESH AIR INTAKE

Due to increasing building code energy efficiency requirements to build “greener” buildings we have installed **Heat Recovery Ventilation** on a per suite bases. This vent services your suites **HRV** and fresh air requirements to meet building code.

We have received some inquiries by owners reporting they are getting smoke inside their homes when using the barbeque on the balcony. These specific units have fresh air intakes on their balconies and owners should not place barbeques or smoke near the intake. Please ensure to place BBQ away from the air intake.

Thank you.
